CREATING AND DROPPING TABLES WITH VARIOUS CONSTRAINTS

```
>_MONGOSH

> use employee
< switched to db employee
> db.createCollection("employees")
< { ok: 1 }
> db.employees.insertOne({name:"nick",age:25,desig:"HR",salary:30000});
< {
  acknowledged: true,
  insertedId: ObjectId('69f619a31b7920fb367f04a8')
}
> show collections
< employees
> db.getCollectionNames().includes("employees")
< true
> db.employee.drop()
< true
> show collections
< employees
> db.student.insertOne({name:"Riley",age:17,marks:95});
< {
  acknowledged: true,
  insertedId: ObjectId('69f61a181b7920fb367f04a9')
}
> db.dropDatabase()
< { ok: 1, dropped: 'employee' }
employee>
